

+ Product Fact Sheet **FIX Hub**

Functionality:

The Connamara FIX Hub allows trading firms to share a single counter-party FIX connection with multiple in-house applications. This simplifies the management of counter-party FIX connections by reducing the need for multiple connections to a single counter-party in order to support multiple in-house applications wishing to connect to the same counter-party.

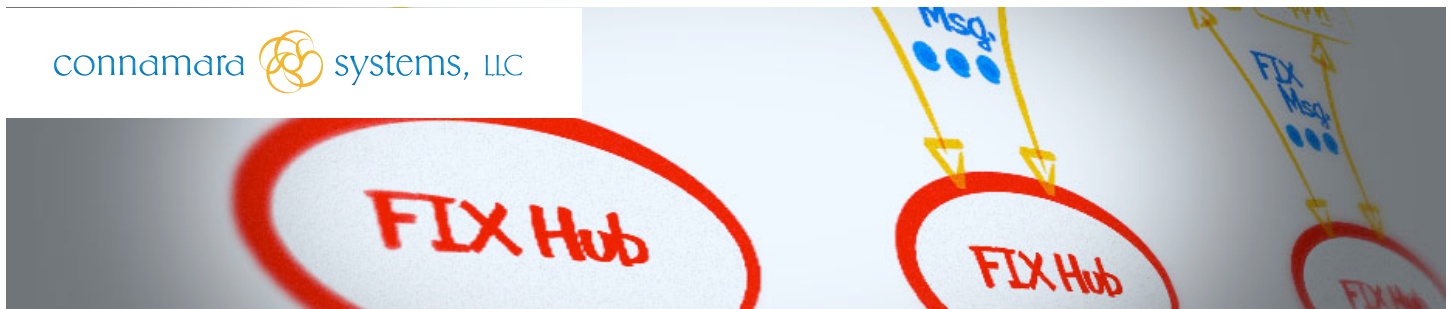

Furthermore, the Connamara FIX Hub allows in-house applications to connect to multiple counter-parties through a single FIX connection. FIX Hub manages the routing of orders to the appropriate counter-party and the routing of order status messages and fill information back to the appropriate in-house application.

Specifically:

- + Connect a single trading application to multiple counter-parties
- + Connect multiple trading applications to a single counter-party
- + Connect multiple trading application to multiple counter-parties
- + Echo all FIX traffic through a FIX administrative session to interested applications

Technology:

The Connamara FIX Hub is a C++ application. It is supported on Linux.
Supports FIX versions 4.0 through 5.0
